EXCELON TILE (Vinyl-Asbestos)

Excelon Tile is representative of today's most widely used resilient flooring material for all grade levels in schools, offices, shopping plazas, and similar public and commercial buildings. Specially formulated of pure vinyl resins fortified with asbestos fibers, it is an economical flooring, yet its many practical advantages include durability and resistance to grease, alkali, and dilute chemicals.

The various stylings in Excelon Tile provide the architect and interior designer wide scope in floor designs and colorings to meet the needs of all types of architectural design and decoration. The rich beauty of any of the Excelon stylings on these pages will last the life of the floor because the uniform color and graining extend through the entire thickness of the tiles.

EXCELON FEATURE TILE

The solid-colored tiles shown in the right-hand column on this page have been created expressly for use as accent spots with other 1/8" gauge Excelon stylings. They are *not* recommended for an entire flooring field because, like plain-colored floors of any composition, they tend to show scratches and soiling more readily than patterned materials.
